# Day#2

## Topic:

### container

```dart
import 'package:flutter/material.dart';

void main() {
  runApp(myride());
}

class myride extends StatelessWidget {
  const myride({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        backgroundColor: Colors.purple.shade200,
        appBar: AppBar(
          backgroundColor: Colors.pink.shade200,
          title: const Text("MY RIDE  "),
        ),
        body: Center(
            child: Container(
          height: 100,
          width: 100,
          color: Colors.blue,
          child: Center(
            child: Text("my rideapp"),
          ),
        )),
      ),
    );
  }
}
```
